

Infinity Whitepaper

Token based on TON

By [@SoftwareMaestro](#), December 20, 2023

Overview:

Infinity is an project built on the fast and decentralized TON blockchain. Our goal is to provide participants with the opportunity to participate in exciting events using the \$INFT token. As part of the Infinity project, we are developing key areas, expanding the functionality and prospects of the \$INFT token.

This token is designed to enrich our community through airdrops, participation in events and competitions, and integration into our projects. We strive to create a unique space for active participants where everyone can enjoy the opportunity to participate in various events, exchange \$INFT tokens and receive rewards for active participation in our growing community and projects.

Join Infinity to take part in the exciting world of the TON blockchain, where the possibilities for sharing, participating and earning rewards become endless. Be part of our growing community and bring new opportunitie with the \$INFT token.

Decimals: 9

Revoked Ownership: False

Total Supply: 2,000,000

Contents:

Introduction

The main goal and principles of the Infinity project with an overview of the role of the TON blockchain.

Problem

Assessing limitations and unmet needs.

Implementing the \$INFT token as a transformative solution.

Tokenomics

The mechanism for creating and distributing tokens.

The importance of \$INFT as a link in the project ecosystem.

Technical details

Overview of the TON blockchain and its functions.

The role of smart contracts in the operation of the \$INFT token.

Staking

The importance of participating in the \$INFT ecosystem.

Conditions and mechanisms of participation in bets.

NFT Collections

How the NFT collection works

Advantages of NFTs and their role in the project

Road map

Stages of project development, goals at each stage.

Conclusion

Summarizing. A few words about the project.

An invitation to participate, invest and use \$INFT to expand the capabilities of blockchain.

Introduction:

Project “Infinity” is meticulously crafted with a clear purpose and guiding principles to establish a sustainable and decentralized ecosystem focused on transparency, security, and user experience. Central to our mission is the active participation of users, emphasizing principles like transparency and security for a trustworthy ecosystem.

The \$INFT token plays a pivotal role, offering users a seamless experience and unlocking opportunities for dynamic participation in events, competitions, and ecosystem projects. As an integral part of our ecosystem, we continuously enhance the \$INFT token's functionality through mechanisms like airdrops and integration into various projects.

Our ultimate goal is to foster a dynamic environment where participants can realize their potential through interactions facilitated by the \$INFT token. Community development is paramount, providing members diverse opportunities to actively engage in the thriving “Infinity” ecosystem.

In exploring the TON (Telegram Open Network) blockchain, we highlight its innovative features and its crucial role in the “Infinity” project. Originating from Telegram, TON operates as a decentralized layer 1 blockchain with remarkable features, including fast transaction processing, low fees, and a commitment to sustainability.

Within the “Infinity” project, TON ensures swift processing of \$INFT transactions, contributing to a modern, sustainable, and environmentally friendly platform. The integration aligns seamlessly with our mission, utilizing TON's decentralized nature to achieve ambitious goals while prioritizing user experience and environmental responsibility.

TON becomes a cornerstone of the “Infinity” project, serving as a technological backbone for a dynamic and sustainable ecosystem. Its innovative features support efficient transactions while aligning with our commitment to environmental responsibility, creating a platform where users confidently engage and contribute to our growth.

Problem:

Adopting the \$INFT token as a transformative solution involves using it as a reward mechanism, facilitating participation in our events, and using it as a cost-effective method of payment in our projects, offering a more cost-effective alternative to the main cryptocurrency TON. This strategic integration addresses identified limitations by providing users with comprehensive and accessible interaction and transaction options.

Users can now use \$INFT as the primary currency in our projects while maintaining financial health and user experience. This integration also helps create a more sustainable and environmentally friendly ecosystem.

Moreover, we offer additional earning opportunities through staking with special tokens, providing users with incentives to actively participate. The advent of NFTs further enhances the transformative impact by allowing users to earn \$INFT tokens as dividends, creating a unique and rewarding experience for holders.

By introducing the \$INFT token, we are addressing existing limitations and unmet needs, creating a vibrant and inclusive ecosystem where users actively participate, stake and earn, ultimately transforming the overall user experience.

Tokenomics:

The mechanism for creating and distributing tokens is a fundamental aspect of our tokenomics strategy. This ensures a well-thought-out and equitable distribution of \$INFT tokens, providing clarity on their purpose and intended use within the project ecosystem. By carefully designing the tokenomics, users gain an understanding of the value and utility of the tokens, fostering awareness of their significance.

\$INFT holds crucial importance as a link in the project ecosystem. It serves as a connecting bridge, facilitating seamless interactions within the platform. Its strategic placement enhances the overall functionality and engagement potential, reinforcing its importance as a vital component of the project's ecosystem.

INFINITY TOKENOMICS

Technical details:

The TON blockchain distinguishes itself globally as the fastest, showcasing remarkable advantages in terms of rapid transaction speeds and minimal fees. This outstanding combination of efficiency provides users with an exceptionally convenient and cost-effective experience, establishing the TON blockchain as a fundamental pillar that significantly enhances the overall usability within our project.

In the intricate workings of our project, smart contracts assume a pivotal role in facilitating the operation of the \$INFT token. These intelligent contracts serve as the backbone, intricately woven into various facets of our ecosystem. They not only enable the seamless creation of NFT collections and individual NFT items but also introduce innovative possibilities that elevate the overall user experience.

A particularly noteworthy functionality enabled by smart contracts is the ability for users to receive \$INFT tokens as dividends for simply holding NFTs. This dynamic feature enhances the versatility of the \$INFT token, creating a tangible incentive for users to engage with and retain NFTs. Beyond mere functionality, this mechanism underscores the critical role of smart contracts in shaping the robust and innovative nature of our ecosystem.

In essence, the TON blockchain's exceptional speed, coupled with the strategic implementation of smart contracts, not only facilitates seamless transactions but also introduces layers of functionality within the \$INFT token ecosystem. This dynamic synergy enhances the overall user experience, providing a foundation for the innovation and versatility that define our project's ecosystem.

Staking:

Active participation in the \$INFT ecosystem opens doors to a range of benefits, exclusive events, and enticing rewards, enriching the overall user experience. Whether through lively event participation or active involvement in various projects, users play a vital role in contributing to the dynamic growth and vibrancy of the ecosystem.

Staking in our project is facilitated by Staking INFT - \$stINFT, a dedicated token on the decentralized platform. Users can stake tokens for varying durations, earning annual interest. After the staking period, users can exchange their staked tokens for regular \$INFT project tokens. This process encourages user commitment, engagement, and offers an avenue for earning additional tokens, fostering a mutually beneficial relationship between participants and project growth.

NFT Collections:

Within the “Infinity” project, NFTs take on various roles, each offering unique advantages. Infinity NFT introduces distinct collections, presenting diverse digital assets across different categories with associated rewards. Owners actively contribute to the project's development, generating demand and reinforcing the intrinsic value of their NFTs.

These NFTs go beyond mere aesthetic pleasure; they act as commemorative tokens symbolizing dedication to the project. Their exclusivity is heightened by a limited mint, and certain NFTs even reward holders with \$INFT tokens as dividends. The dividend amounts vary across different NFT categories based on the holding period.

In essence, NFTs in the Infinity project offer a dynamic blend of aesthetic enjoyment and economic value, creating a symbiotic relationship between ownership and the flourishing growth of the project. Participants not only experience the uniqueness of digital assets but also actively contribute to the economic ecosystem of the “Infinity” project.

Road map:

Strategically planning and progressing through project stages is crucial for transparency and goal achievement. Our roadmap outlines clear objectives at each stage, reflecting our commitment to building a progressive and sustainable ecosystem. Each step represents a forward move towards our ambitious goals.

Done:

Q3 2023: Launch of the “Infinity” project.

Q3 2023: \$INFT token sale on DEX DeDust.io.

Q3 2023: Development a bot providing information about the project.

Q4 2024: Private chat for holders.

Q4 2024: Launch of a game project.

Q4 2024: Introduction of \$INFT token staking.

Q4 2024: Expansion of functionality and introduction of additional options to improve the Infinity project.

Q4 2024: Listing on the EXTON exchange.

Q4 2024: Creation of the TON-20 “inft” token.

Q1 2024: Creation of the Infinity NFT collection, within which NFT owners will receive \$INFT tokens.

Not done:

Q1 2024: Token verification on Dogenance.

Q1 2024: Expansion in the media sphere.

Q1 2024: Creation of a website for the “Infinity” project.

Q1 2024: Development of projects integrating the \$INFT token.

Q1 2024: Creation of NFT that provide various benefits to holders.

Q2 2024: Listing on the xRocket exchange.

Q2 2024: Listing on the DeDust.io exchange.

Q3 2024: Listing on CoinGecko.

- subject to change :)

Conclusion:

As we take a moment to contemplate the trajectory of the "Infinity" project, the accomplishments and milestones achieved serve as tangible evidence of our dedication to innovation and the unwavering commitment of our community.

We warmly invite investors and blockchain enthusiasts to actively participate in the evolving landscape of the "Infinity" project. Whether you're looking for engaging community events, investment opportunities, or exploring the full potential of blockchain technology, \$INFT is your gateway to unlocking new opportunities.

In conclusion, the "Infinity" project pioneers blockchain innovation, merging technology with a vibrant community. Celebrating our achievements, we anticipate continued growth, collaboration, and exploration. Join us, where your participation, investment, and use of \$INFT contribute to the ongoing success of the "Infinity" project.
